Copending Applications

Applicants must bring to the attention of the examiner, or other Office official involved with the examination of a particular application, information within their knowledge as to other copending United States applications which are "material to patentability" of the application in question. MPEP 2001.06(b). See *Dayco Products Inc. v. Total Containment Inc.*, 66 USPQ2d 1801 (CA FC 2003)

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1616

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-8 rejected under 35 U.S.C. 103(a) as being unpatentable over SACHSE et al. (DE 3609645). The reference teaches triazole-based combinations for synergistic control of plant diseases. Dithianon is one the combinations with triazole fungicides. See the abstract, pages 2, 3 examples and claims. The reference teaches the synergistic combinations, which embrace presently, claimed invention.

Instant claims differ from the reference in claiming a synergistic combination of very specific set of triazole fungicides with dithianon.

Art Unit: 1616

It would have been obvious to one skilled in the art to prepare additional beneficial synergistic combination of dithianon and any triazole fungicides with the expectation of synergism between these two classes of fungicides. Since prior art teaches such synergistic effect of these compounds it would be a matter of routine experimentation to find out the synergistic amounts. Motivation has been provided by the prior art to make such combinations with the expectation of synergism. No criticality and/or unexpected results are noted.

In the light of the forgoing discussion, the Examiner's ultimate legal conclusion is that the subject matter defined by the instant claims would have been obvious within the meaning of 35 U.S.C. 103(a).

EP 0526 206 reference teaches the combination of the compounds of formula (I) and dithianon and various other fungicidal compounds to enhance the fungicidal activity. Compounds of formula (I) of the reference contain a cyclopentane ring; none of the present compounds contain this ring. Furthermore, prior art does not teach synergistic mixture of fungicidal combination of dithianon (A) and azoles derivatives (B) as presently claimed.
